

CLAIMS:

1-62 (Cancelled)

63. (New) A system comprising:

a management center;

a plurality of nodes configured to relay data from the management center to a client; and

wherein the management center comprises a mapping engine that is configured to determine a route from the management center to the client via a selected one of the nodes.

64. (New) A method comprising:

receiving a request for data from a client, the request being received by a management center;

directing the client to a node that is selected as being best situated to relay the data from a content provider to the client, the client being directed to the node by the management center; and

relaying the data from the content provider to the client via the selected node.
